Student Academic Dashboard

HTML structure, CSS styling, and the rendered result

Project overview

This project builds a student portal page called **Student Academic Dashboard**. HTML organizes the information into meaningful sections; CSS controls the layout, colors, spacing, tables, and attendance bars. The browser screenshot shows the finished page.

HTML screenshot explained in order

Code area / element	What it does
Document setup: doctype, html, head	Declares an HTML5 document and starts the page metadata.
Title and stylesheet link	Sets the browser-tab title and connects the separate CSS file.
Body and sidebar container	Begins visible content and creates the left navigation area.
Sidebar heading and links	Shows “My Campus” and navigation links for Student, Results, Attendance, Subjects, Exams, and News.
Main content heading	Displays “Student Academic Dashboard” and a short welcome line.
Student details card	Groups student name, ID, course, and semester under a section heading.
Semester results table	Uses table headings and rows to show subjects, marks, and grades.
Attendance section	Pairs each subject label with a percentage and a progress element.
Subject information table	Lists each subject with its teacher and room.
Exam schedule section	Introduces the exam schedule table, including subject, date, and time columns.
Remaining closing tags	Close the sections and document in a valid nested order.

Reading note: The first screenshot is zoomed out, so the explanation follows the visible page structure and labels rather than claiming exact source line numbers.

CSS screenshot explained by element

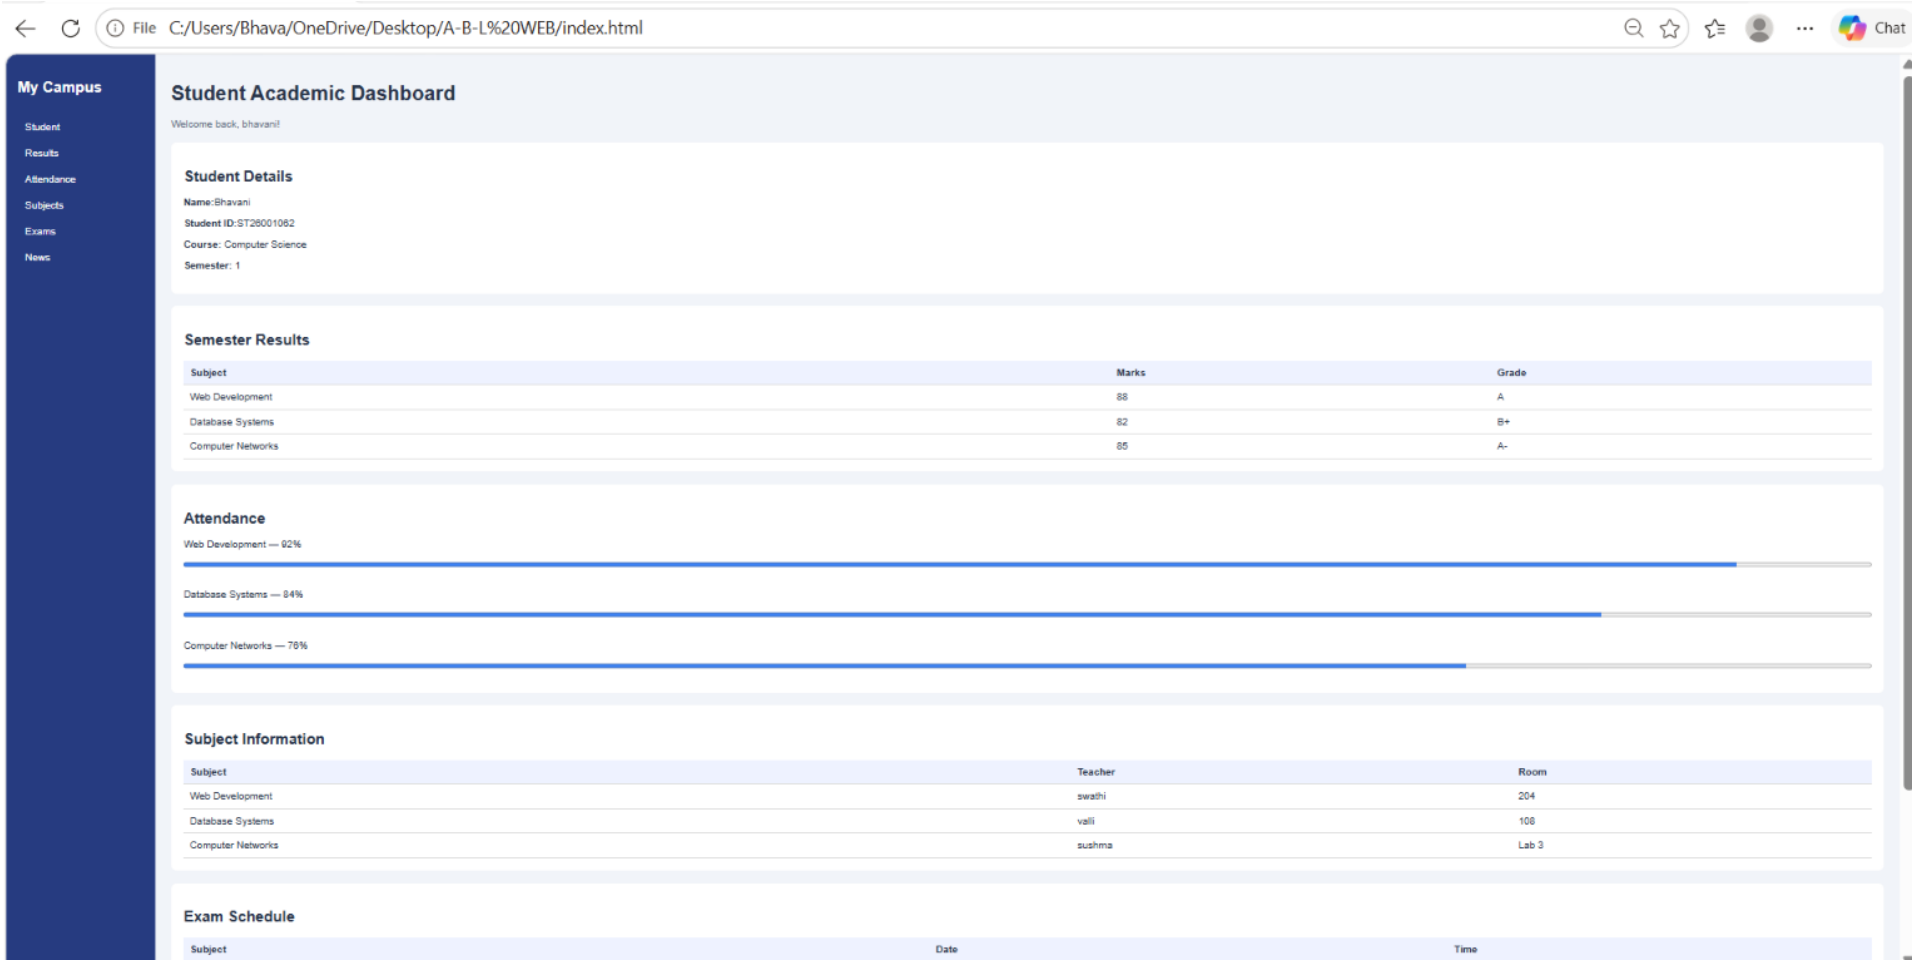

The stylesheet controls how the dashboard looks and adapts to different screen widths.

Selector / rule area	Effect on the page
body	Sets the Arial/sans-serif font, a light gray-blue page background, dark text, and removes the browser’s default outer margin.
.sidebar	Creates the fixed, full-height left navigation panel with a dark blue background, white text, padding, and a consistent width.
.sidebar h2 and .sidebar a	Styles the sidebar heading and makes each navigation link a separate readable row without an underline.
.sidebar a:hover	Changes a link’s background when the pointer is over it, giving a simple hover cue.
.content	Offsets the main page content so it starts beside the fixed sidebar, then adds inner spacing.
.welcome	Uses a muted text color for the short greeting beneath the page title.
.card	Gives each dashboard section a white panel, padding, space between panels, and rounded corners.
table	Makes tables fill the available width and joins cell borders into a clean grid.
th, td	Left-aligns cell content, adds cell padding, and draws a light bottom divider.
th	Adds a pale blue background to distinguish column headings from table data.
progress	Makes attendance indicators wide, compact, and blue using the accent color.
@media rule	At narrower viewport sizes, adjusts the sidebar width and matching content offset for a more usable layout.

Together, these rules create the page’s visual hierarchy: navigation on the left, a spacious content area, white information cards, readable tables, and blue attendance indicators.

Rendered output

The browser output shows the dashboard with the CSS applied. The screenshot includes the student profile, semester results, attendance, subject information, and the start of the exam schedule.

Conclusion

The Student Academic Dashboard demonstrates how HTML and CSS work together to present academic information in a clear, organized way. HTML provides the page structure and data groupings; CSS makes those sections visually distinct and easier to scan. The result brings student details, grades, attendance, subject locations, and exam planning into one dashboard.
