Restaurant Cafe Website

HTML structure, CSS elements, and the rendered output

Title and project description

The screenshots show **Olive & Thyme**, a restaurant cafe website. Visitors can explore the welcome banner, browse dishes, meet the chefs, read about the restaurant, request a reservation, and find contact information. This report explains each visible part of the HTML and CSS in order, then presents the browser output and a conclusion.

How to read this report

The source-code screenshots are zoomed out, so the descriptions follow the visible document structure and selectors. They explain the code section by section rather than assigning uncertain source line numbers.

HTML Description, in Order

The first source screenshot contains the page structure and content blocks below.

HTML block	Description
Document setup	The doctype and html/head tags start an HTML5 page and define its metadata.
Meta tags and title	Set character encoding, responsive viewport behavior, and the browser-tab title.
Stylesheet link	Connects the HTML page to the separate CSS file.
Header and logo	Creates the top bar and displays the “Olive & Thyme” brand.
Navigation	Adds links to Menu, Our Chefs, About, and Contact sections.
Hero section	Welcomes visitors with “Fresh food, warm moments,” a short supporting line, and a menu button.
Menu section	Uses article cards for Garden Pasta, Grilled Chicken, and Chocolate Cake, with descriptions and prices.
Chef section	Shows chef profile cards and brief descriptions.
About and blockquote	Presents the restaurant story and a highlighted customer quote.
Reservation form	Collects name, email, date, and party size. The fields are required and a button submits the request.
Footer	Shows visit and contact details such as location, phone, email, and opening hours.
Closing tags	Close sections and the HTML document in their proper nested order.

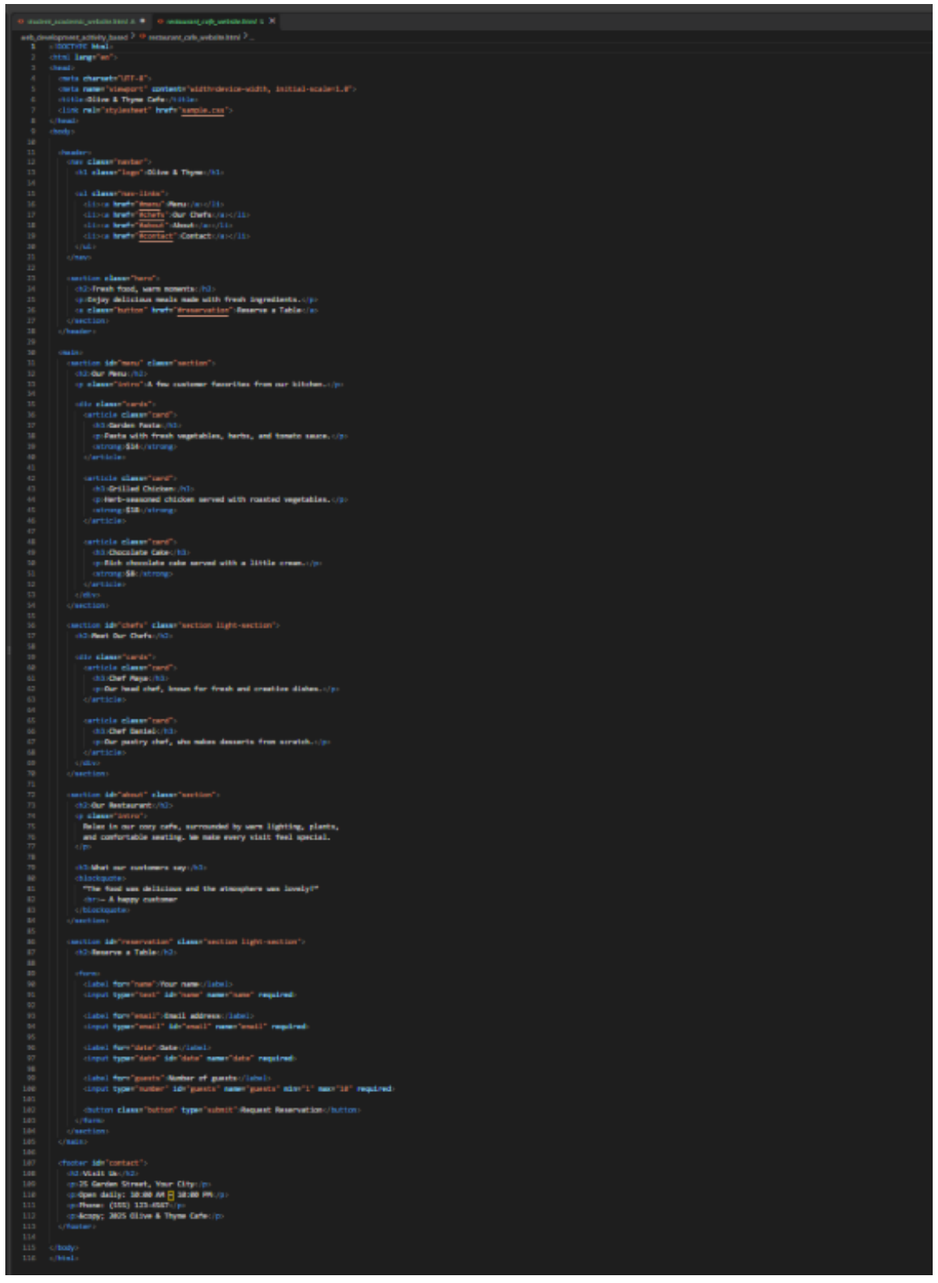

CSS Description by Element

The stylesheet creates a warm cafe identity using color, spacing, typography, card layouts, and hover states.

CSS selector	Description of its effect
Universal selector (*)	Applies border-box sizing and removes default spacing for predictable layout.
body	Sets a Georgia-style serif font, dark text, and comfortable line spacing.
header	Uses a deep olive-green background with light text.
.bar	Arranges the logo and navigation in a horizontal bar with alignment and padding.
.logo	Sets the brand text size and weight so it stands out.
.nav-links	Places navigation items in a row and removes list markers.
.nav-links a	Styles links in a light color without underlines; hover adds an underline.
.hero	Creates a tall centered welcome area with generous spacing and a warm accent background.
.hero h2	Makes the welcome message prominent and adds spacing.
.button	Styles a rounded orange call-to-action; hover changes its background color.
section and section headings	Add consistent section spacing and centered headings.
.menu-item	Limits menu-card width and centers each card.
.light-section	Adds a soft cream background to distinguish selected sections.
.cards	Uses a flexible row layout to align multiple menu or chef cards.
Form and footer rules	Style reservation fields and the bottom contact area.

Enlarged crop focused on the HTML source pane.

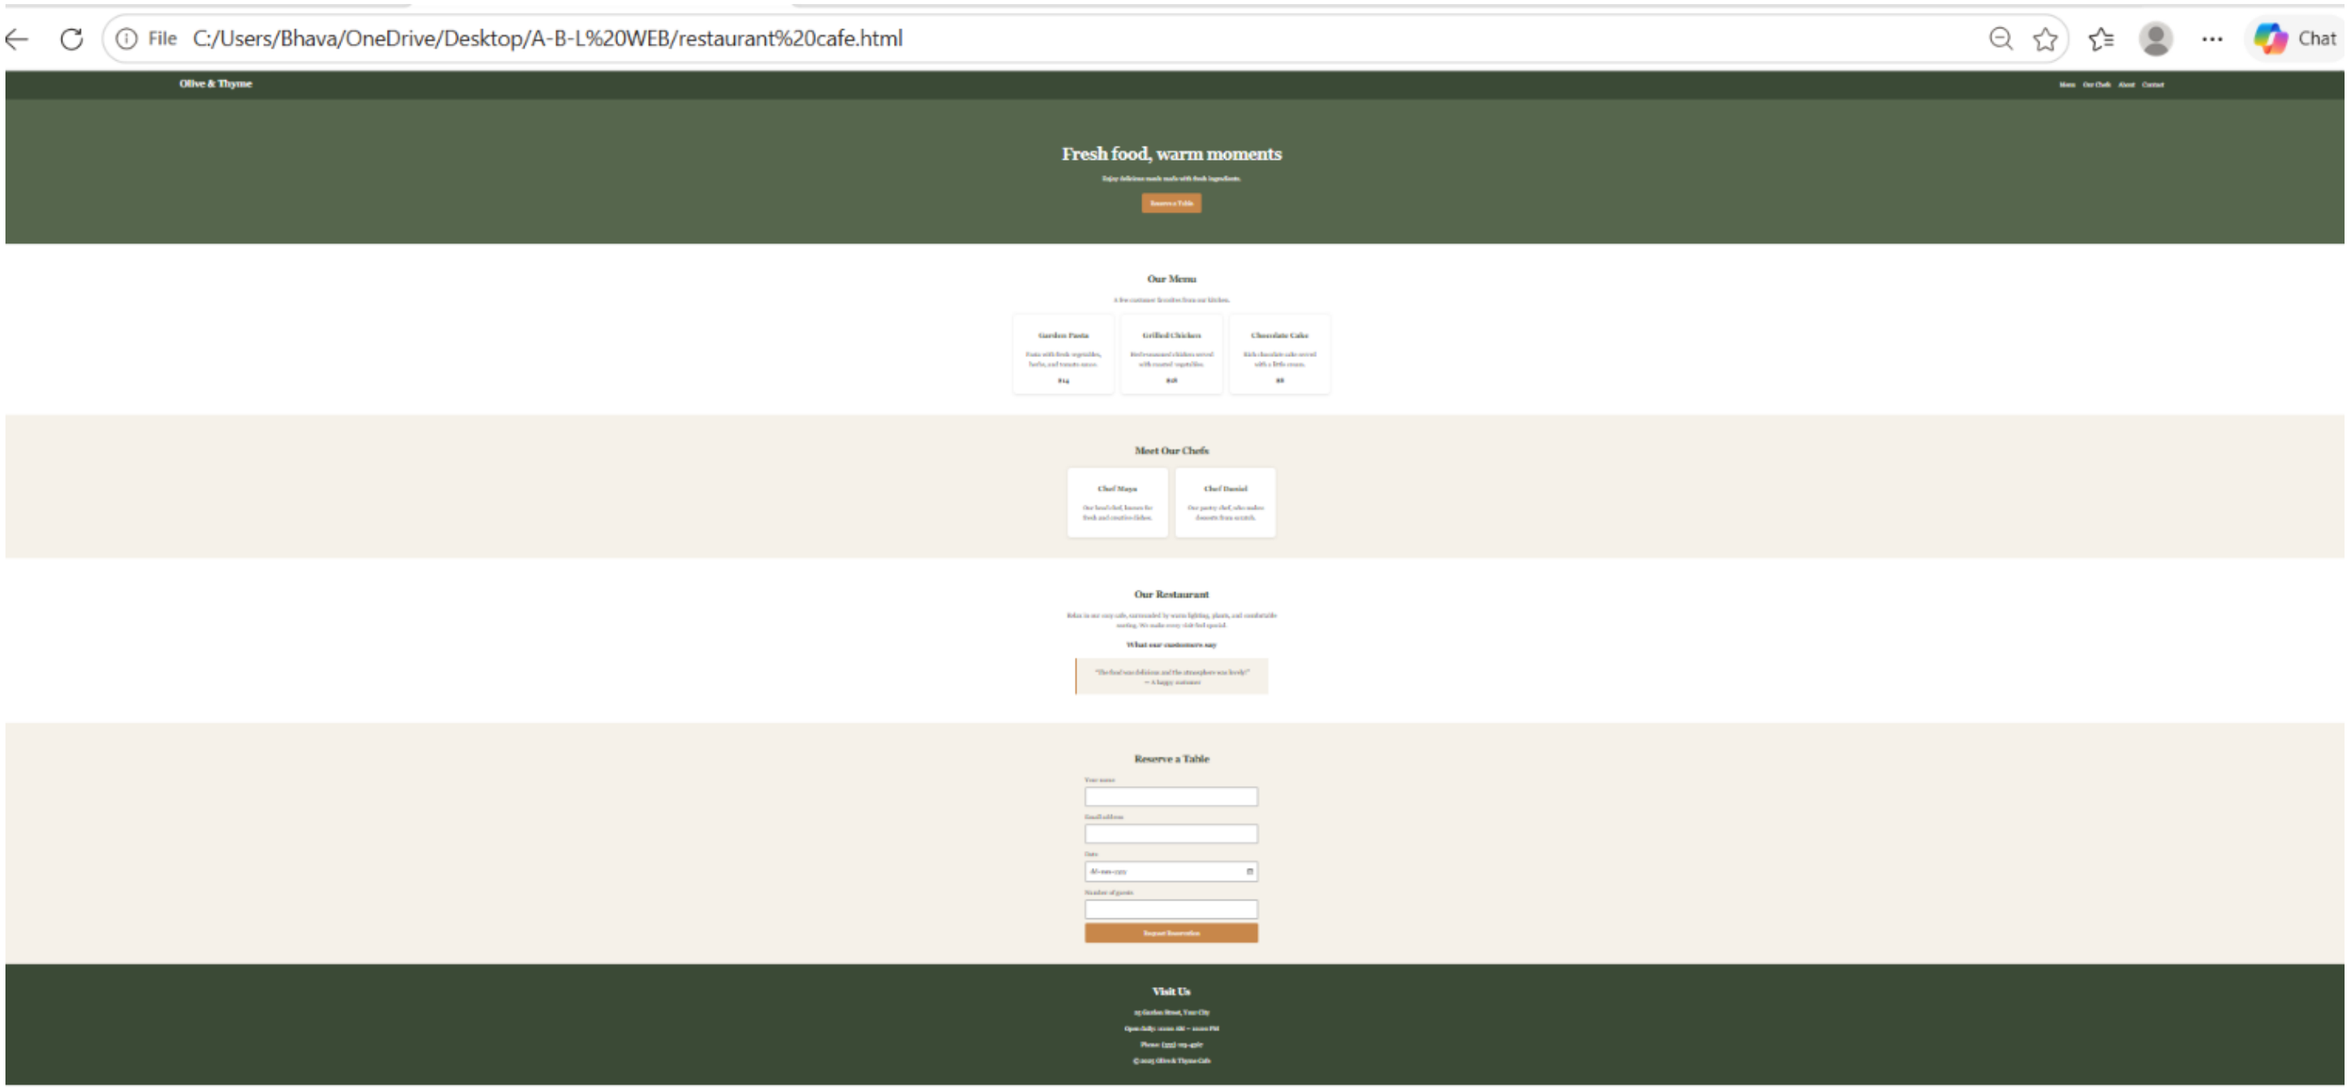

CSS Source Screenshot

Enlarged crop focused on the stylesheet source pane.

Rendered Website Output

The browser view shows the finished Olive & Thyme cafe page.

Conclusion

This project shows how HTML and CSS work together to create a complete restaurant cafe website. HTML organizes the page into meaningful sections and supplies the menu, chef profiles, restaurant story, reservation fields, and contact details. CSS gives those sections a consistent appearance through typography, color, spacing, card layouts, and interactive button and link states. The finished page guides visitors from discovering the cafe to exploring its menu and requesting a reservation.
